*1. Digital Wallet Card Binding Fraud Detection. **Work In Progress***

Collaborating with BoA to prevent ATO and card binding initiated from digital wallet apps.  
 Using machine learning to classify fraudulent card binding based on bank logs.  
 Applying dynamic traffic analysis to extract insecure verification protocols utilized by banks.

*2. Android Banking Accessibility Malware Analysis. **Published - USENIX Security '24***

Developed dynamic forced execution techniques to reveal 215 targeted victims of a11y malware.  
 Created semantic modeling of 7 a11y abuse vectors and 6 persistence mechanisms.  
 Applied symbolic execution to attribute a11y malware behaviors to their fine-grained victims.  
 Detected 59K instances of abuse vector from automated analysis on 9,850 Android a11y malware.

*3. Ethereum Fraudulent Smart Contract Forensics. **Published – IEEE S&P '24***

Uncovered 2,638,752 ETH (\$2,089,504,682) in illicit profit associated with fraud contracts.  
 Traced 1,283,198 contracts linked to 91 creator wallets from 157 confirmed fraud contracts.  
 Developed symbolic analysis engine to aid Etherscan and FBI to combat fraud contracts.

*4. Android Frontend Botnet Takedown. **Accepted – NDSS '25***

Created app sandbox to capture dynamic code loading (DCL), e.g. JAR, DEX, APK, JS.  
 Applied taint analysis to classify 5 DCL routine capabilities, e.g. command execution, toast msg.  
 Generated remediation payload to notify frontend user and automatically remove frontend botnet.  
 Successful remediation payload generated for 523 / 702 Android botnet.

*5. Android Industrial Control System (ICS) App Vulnerability Analysis.*

Developed static scanner that identifies unauthorized access, command injection, DoS, and UI modification vulnerabilities in Android ICS apps.  
 Identified 52 instances of vulnerabilities from 139 ICS apps.  
 1 CVE issued, 4 email confirmations from vulnerability disclosure to developers.

*6. Windows Botnet Covert C&C Infiltration. **Published – CCS '21***

Identified 62K over-permissioned protocols (FTP, IRC, MySQL, etc.) used by 200k botnets.  
 Applied backward slicing in angr to extract 443K instances of C&C monitoring capabilities.
